

THE EASY ACCESS HOME

Grade **02**

ALIGNED WITH INTERNATIONAL STANDARDS

This book supports essential educational frameworks that shape future-ready minds:

- 21st Century Skills
- Sustainable Development Goals (SDGs)
- Social-Emotional Learning (SEL)
- Universal Design for Learning (UDL)

STEAM Scouts is a ground-breaking STEAM book series with an interdisciplinary focus designed to ignite curiosity, creativity, and critical thinking in learners worldwide. The series supports Social-Emotional Learning (SEL) by promoting core competencies like self-awareness, self-management, social awareness, relationship skills, and responsible decision-making. It also aligns with the UN Sustainable Development Goals (SDGs), fosters 21st Century Skills, and meets international educational standards to equip learners with tools for a dynamic, innovative, and impact-driven future. Furthermore, it is built on Universal Design for Learning (UDL) principles, ensuring inclusive, accessible, and engaging STEAM education for all students, regardless of learning ability.

Key Features

Standards-Aligned

- NGSS (Next Generation Science Standards) – Authentic scientific inquiry & engineering design.
- CCSS (Common Core State Standards) – Rigorous literacy & math integration.
- Cambridge & IB (PYP/MYP/DP) – Global perspectives & interdisciplinary learning.
- ISTE (Technology Standards) – Digital literacy & computational thinking.
- STEL (Standards for Technological & Engineering Literacy) – Real-world problem-solving.

Social-Emotional Learning (SEL) and Global Citizenship

- Each book fosters collaboration, resilience, leadership, and ethical decision-making while connecting to multiple UN Sustainable Development Goals (SDGs) - such as Quality Education (SDG 4), Clean Energy (SDG 7), Climate Action (SDG 13), and Innovation (SDG 9) - empowering students to think globally, encourages ethical innovation & community impact.
- Differentiated challenges to meet diverse learning needs and skill levels.
- Visual cues and infographics to enhance understanding and engagement.
- Guided instruction to support learners through new or complex concepts.
- Scaffolded activities that build skills progressively and promote learner independence.

Why Choose This Series?

Future-Ready Skills – Prepares learners with essential skills like creativity, collaboration, and critical thinking for future careers and global challenges.

Teacher & Student-Friendly – Includes engaging lesson hooks, discussion prompts, guided instruction, and hands-on tasks for seamless learning.

- **SDG-Themed Modules** – Each module links to 2+ UN SDGs, blending academics with global purpose and ethical action.
- **Inclusive & Engaging** – Built on UDL principles to ensure accessibility through differentiated pathways, visual supports, and hands-on learning.

Perfect For:

- K-12 Schools adopting IB, Cambridge, NGSS, or CCSS
- STEM/STEAM Coordinators seeking industry-relevant curricula
- Homeschoolers and Educators wanting SDG-aligned, future-focused content
- Educational Institutions committed to sustainability and inclusion

Theme

03

THE EASY ACCESS HOME

Each week has a double session, total time of session 80-90 mins

Week	Unit Name	Lesson	Page
Week 1	Unit 1: Spark The Challenge!	Lesson 1: What's Missing?	2-17
Week 2		Lesson 2: Smart Starts.	18-30
Week 3		Lesson 3: Designing with Heart.	31-52
Week 4	Unit 2: Innovators in Action.	Lesson 1: Builders at Work!	53-68
Week 5	Unit 3: Beyond Imagination.	Lesson1: Tech That Talks.	69-84
Week 6		Lesson 2: Say It, Code It!	85-104
Week 7		Lesson 3: Circuits in Control!	105-120
Week 8		Lesson 4: Sound Explorers.	121-136

About The Theme

Everyone deserves a home that is smart, safe, and welcoming—regardless of their needs or abilities. However, not all homes are designed with inclusivity in mind. Some individuals may face challenges with mobility, vision, hearing, or dexterity. In this theme, students will become young innovators, coders, and engineers as they explore how artificial intelligence (AI) and smart technology can make homes more accessible, adaptable, and user-friendly for all.

Through engaging design challenges, students will create smart solutions that respond to voice commands, sounds, and movement. They'll build simple machines like ramps and pulleys, use 3D tools to design inclusive spaces, and experiment with circuits that include LEDs, sensors, and programmable components. Students will even prototype their own voice-controlled rooms, learning how AI technologies are used in smart homes to enhance daily life.

As they work, students will build computational thinking skills—writing clear algorithms, recognizing patterns, and using conditionals to design responsive systems. They'll discover how AI and coding work together to create intelligent environments that assist people with a wide range of needs—such as turning on lights with voice input or automating tasks for greater comfort and independence.

This project supports Sustainable Development Goals 9 (Industry, Innovation, and Infrastructure), 10 (Reduced Inequalities), and 11 (Sustainable Cities and Communities). It encourages students to blend empathy, creativity, and problem-solving with technology. By the end of the theme, students will have designed a smart, inclusive home—demonstrating how AI and coding can help build a more comfortable, fair, and connected world for everyone.

HOW TO USE THIS BOOK?

1

Ready, Set, Learn!

Where we merge your existing knowledge with exciting new discoveries.

2

Inquiry-Based Learning!

Let's Think!

In this section, students will brainstorm and explore possible solutions to specific problems. This encourages critical thinking and creativity as they consider various approaches.

Explorer's Toolkit

Here, students will dive deeper into the topic. They will engage with curated videos, articles, educational games, and hands-on experiments to broaden their understanding and spark curiosity.

DIY Lab

It's part of the explore, students will undertake hands-on projects where they will design, build, and test their own creations. They will apply scientific principles, use technology and engineering skills, explore artistic concepts, and utilize mathematical reasoning.

Screen Lessons

Students will watch videos that explain key concepts in an engaging and accessible way.

3

Problem-Based Learning:

- **Introducing the problem:**
Students will join a journey to tackle real-world environmental challenges. Through hands-on activities and engaging tasks, they will apply their knowledge and skills to discover innovative solutions.
- **Apply the Engineering Design Process (EDP):**
Students will use a structured approach to define problems, conduct research, generate ideas, prototype solutions, test, evaluate, and refine their designs.
- **The Scientific Method:**
Students will follow a systematic process of inquiry—making observations, forming hypotheses, conducting experiments, analyzing data, and drawing conclusions—to develop a deeper understanding of scientific concepts and problem-solving. In doing so, they will incorporate the CER framework to present their scientific claims, provide evidence from their experiments, and explain their reasoning behind the conclusions they draw.

4

Project-Based Learning:

PBL immerses students in real-world challenges through hands-on projects. They build critical thinking, creativity, collaboration, and communication skills while designing solutions and taking ownership of their learning.

5

Story

Join Adam and Laila, two fearless STEAM Scouts, on adventures full of discovery and creativity! From building inventions to solving real-world challenges, they'll inspire you to think, experiment, and innovate. Step into the world of science, technology, engineering, arts, and math—where every challenge becomes an adventure!

Story Reflection

In this section, students will reflect on the story's key themes, characters, and challenges.

6

Assessment Exercises:

These are divided into three categories to ensure comprehensive learning and mastery.

Apprentice:

Developing understanding and can apply skills with guidance.

Builder:

Demonstrates solid understanding and can apply skills independently.

Mastermind:

Demonstrates deep understanding and can apply skills creatively and strategically.

7

Career Readiness

This section equips students with essential skills for future careers by fostering problem-solving, teamwork, and adaptability. Through hands-on projects, real-world applications, and critical thinking challenges, students develop the confidence and competencies needed for success in the ever-evolving job market.

8

Mission Innovate

Now, it's your turn! In Mission Innovate; students will apply their creativity, problem-solving skills, and knowledge to develop their own competition projects. This challenge encourages independent thinking, collaboration, and real-world innovation, empowering students to become the next generation of creators and problem-solvers.

Now I Can

This section is designed to help you measure your progress and achievements. Enjoy your exploration and learning journey through this STEAM book!

My Journal

In this part students will write their own story while they are creating the project.

By the end of this theme, students will be able to:

- Understand what disability means and identify challenges people with disabilities face in their homes.
- Develop empathy and explore ways to make homes more accessible for everyone.
- Recognise how technology can be used to help people in their homes.
- Use the Engineering Design Process to design accessible home features that support individuals with disabilities.
- Describe the role of an Assistive Technology Specialist and how technology can help people in daily life.
- Describe how simple machines (e.g., ramps) can help people with disabilities move or reach things more easily.
- Understand that fair design means everyone can access a space.
- Use measurement and comparison to check the size, length, and height of design elements.
- Explore how to use Tinkercad's Simulation Lab to test and improve accessibility design ideas.
- Understand how homes and neighbourhoods can be designed to include everyone.
- Use simple materials to build a physical model of a home with accessibility features.
- Understand how choices about materials affect home design.
- Compare room sizes and order design elements by length and number.
- Appreciate patterns and designs in cultural art and home decoration.
- Understand what Artificial Intelligence (AI) means and how it helps people.
- Explore how AI can make daily tasks easier and more accessible for people.
- Use PictoBlox to code a sprite that responds to voice commands.
- Apply speech recognition and text-to-speech blocks in a coding activity.
- Recognize the importance of loops in programming repetitive actions.
- Identify and fix common problems in a simple LED circuit.
- Explain which leg of an LED connects to the power side and why it matters.
- Understand the role of a resistor in protecting the LED.
- Understand what sound is and how it works.
- Use sound to control a simple device (LED) with voice.

Unit

1

Lesson

1

Spark The Challenge!

What's Missing?

Time Frame: [90 min]

Lesson Objectives:

By the end of this lesson students will be able to:

- Identify everyday tasks that may be difficult for people with physical or sensory disabilities.
- Recognize specific in-home features (like stairs, high shelves, or light switches) that might create challenges.
- Discuss how it feels to be left out or unable to do something easily.
- Show kindness and respect when learning about others challenges and designing fair solutions.
- Identify technology and how it is used at home.

Challenge questions of the lesson

1. What are some things that can be hard for people with disabilities, like moving, talking, or learning?
2. Who are people with disabilities, and how can technology help them do things more easily?

SEL Relation

- **Self-Awareness:** Understanding personal feelings related to accessibility.
- **Self-Management:** Working towards solutions, demonstrating self-control.
- **Social Awareness:** Showing empathy, respecting diverse needs.
- **Relationship Skills:** Communicating, collaborating, and working as a team.
- **Responsible Decision-Making:** Solving problems ethically.

Engage

Teacher Role:

- Narrate a short story about Uncle Sam and the challenges he faces at home due to a disability.
- Use expressive storytelling to help students connect emotionally.
- Show pictures of Uncle Sam with different feelings (happy, challenged, proud).
- Ask guiding questions to encourage students to reflect on feelings and experiences.
- Facilitate a respectful and inclusive class discussion about disabilities.
- Display pictures to support understanding and give students visual clues.
- Encourage students to think about how others feel and how to help.
- Ensure all students feel safe, heard, and supported during sharing.

Expected From Students:

- Listen carefully to the story and stay focused.
- Ask questions if something is unclear.
- Look at the pictures and decide which one shows how Uncle Sam might feel.
- Share their own experiences of when something was hard to do.
- Participate in class discussion about disabilities and empathy.
- Offer ideas about challenges people with disabilities might face.
- Use pictures as clues to help them think of examples.
- Show kindness and respect when talking about others.
- Think creatively about how to make things easier and fairer for everyone.

Parts of the books included

Story

1. Set the Scene with Curiosity and Care

- Teacher says (gently, with interest):

“Today, Lila is visiting someone very special—her Uncle Sam! Can you think of someone in your family you love to visit?”

(Let students respond—build personal connection.)

Then say:

“But this visit is a little different. Lila notices something new. Let’s listen closely and find out what it is...”

2. Read the Story Aloud with Expression

Use tone and body language to help bring emotions to life:

- Use a warm voice for Uncle Sam.
- Use a curious voice for Lila.
- Use a gentle, thoughtful voice for the narrator.
- Pause to ask questions like:

“Why do you think Uncle Sam wishes the lamp could turn on by itself?”

“How do you think Lila feels when she sees her uncle having a hard time?”

Possible Strategies for Implementation:

1. Empathy Role-Play (Social-Emotional Learning)

- Students take turns pretending to be Uncle Sam, Lila, or Dad.
- Let them act out how they would help someone at home who has trouble moving.
- Use props like a pretend lamp or wheelchair space to act out real moments from the story.

2. Picture Talk + Feelings Sort

- Show pictures of Uncle Sam in different situations (e.g., smiling, struggling, feeling proud).
- Ask students: “How is Uncle Sam feeling here?”
- Let students place pictures under feeling labels: Happy, Challenged, Proud.

3. Technology Connection Activity

- Show pictures of tools at home (e.g., light switch, ramp, remote, voice speaker).
- Ask: “Which of these tools could help Uncle Sam?”
- Let students draw or circle helpful tools in their books.

4. Think, Pair, Share: “What Would You Do?”

- Ask students: “If you were Lila, what would you want to do to help?”
- Let them talk with a partner, then share ideas with the class.

Story Reflection

Objective:

Students will recognize and describe how Uncle Sam feels during a challenge, and relate it to their own experiences with difficult tasks.

Answer:

- Circle response: “Having a hard time” (when Uncle Sam talks about reaching the lamp or moving around when tired).

- ☐ Yes
☐ No

happy

having a hard
time

proud

3. You can write a few words or draw a picture to show how you felt.

- **Yes/No box:** Most students will likely check Yes.
- **Written or drawn response:**
 - “I felt sad when I couldn’t open a jar.”
 - “I needed help tying my shoes.”
 - Drawing of a child looking frustrated or being helped.

Possible Strategies for implementation:

1. Model the Thinking Aloud

- Teacher models by saying: “When I see Uncle Sam trying to turn on the lamp, I think he might feel tired or frustrated. What do you think?”
- Share a personal story of when you had a hard time doing something.

2. Use Emotions Cards or Facial Expressions

- Show emoji-style faces or flashcards: happy, proud, challenged, frustrated.
- Ask: “Which one matches how Uncle Sam might be feeling?”

3. Partner Share Before Writing/Drawing

- Let students talk to a partner: “Tell them about a time something was hard for you.”
- Then invite them to draw or write in their own boxes.

4. Safe Sharing Space

- Offer optional whole-group share-outs for volunteers.
- Reinforce that all feelings are okay and valid.

5. Use Visuals from the Story

- Display an image of Uncle Sam reaching for the lamp or looking tired.
- Point to details that support how he may be feeling.

Let's Think!

Objective:

Students will develop an understanding of technology and disabilities, and identify everyday challenges faced by people with physical, communication, or learning difficulties.

Answers:

What do you think technology is?

- Technology is something people use to help them.
- It can be a tool like a phone, a light, or even a pencil.
- Technology helps make things easier to do.

What does it mean when someone has a disability?

- A disability means it can be hard for someone to do some things.
- Some people might have trouble walking, hearing, seeing, or learning.
- People with disabilities might need special tools to help them.

Possible Strategies for implementation:

1. Picture Walk + Vocabulary Support

- Before students write, guide them through each image and ask: “What’s happening here?”
- Introduce or review words like: wheelchair, speech, tablet, help, problem, fair.

2. Think-Pair-Share

- Students think silently about each question.
- Share with a partner before writing answers.

3. Anchor Chart Support

- Create a class chart with key words or sentence starters:
 - “Technology helps us...”
 - “A disability means...”
 - “It might be hard to...”

4. Flexible Expression Options

- Allow students to draw instead of write for any question.
- For emerging writers, allow dictation or offer word banks.

5. Model the First Response

- As a class, brainstorm one definition of technology together.
- Write a shared sentence on the board to use as a model.

Teacher's Role:

Set the tone by explaining that the activity is meant to help students understand how some people feel when things are hard to do.

- Model each challenge safely, showing how to do it gently and with care.
- Give clear instructions and supervise the class during each task (blindfold, headphones, tied legs).
- Ask guiding questions aloud, such as:
 1. “What was tricky about that?”
 2. “How did it feel to need help?”
- Encourage respectful observation and teamwork, making sure all students are kind and patient with each other.
- Facilitate a calm reflection discussion afterward, helping students make connections to the feelings of people with disabilities.

Expected From Students

- Try each challenge activity safely and thoughtfully.
- Notice how the challenge made them feel—frustrated, confused, thankful for help, etc.
- Share their feelings through:
 1. Writing or drawing in the reflection boxes.
 2. Answering reflection questions like:
“What did you learn about how others feel?”

- Show empathy and kindness when talking about their experiences and how others may feel in real life.

Parts of the books included

DIY Lab

Objective:

Students will experience simulated challenges to develop empathy and understand how everyday tasks can be difficult for people with disabilities.

Materials Needed:

- Soft blindfolds, scarves, or strips of cloth.
- Headphones or ear muffs.
- Chairs and string/tape to gently limit leg movement.
- Open classroom space for safe movement.

Activity Instructions

• Introduce the activity

“We’re going to try some challenges to understand how it feels when something is hard to do. This helps us learn how to care about others.”

• Demonstrate each challenge before students begin

- **Blindfold Challenge:** Show how to tie the cloth gently over the eyes and guide students from seat to door safely.
- **Hearing Challenge:** Put on headphones and demonstrate a whisper/silent phrase for the student to guess.
- **Movement Challenge:** Show how legs are lightly tied and how to move slowly and carefully from chair to door.

- **Set expectations**
 - Be gentle and respectful.
 - It's okay to feel confused or need help.
 - Focus on how it feels, not doing it perfectly.
- **Guide students through each station in small groups**
 - Allow time for all students to try each challenge safely.
- **Lead the reflection**

Ask guiding questions:

 - “What did you notice?”
 - “How did it feel to need help?”
 - “What do you think this teaches us about others?”

Possible Strategies for Implementation

1. Rotation Stations

- Set up three corners of the classroom, one for each challenge. Have students rotate in small groups.

2. Pair & Support

- Pair students so one can guide or assist during blindfold or movement tasks, emphasizing kindness and cooperation.

3. Model First

- Always demonstrate each challenge before students try it, showing safe and respectful behavior.

4. Use Visual Prompts

- Place simple signs or emojis at each station to show the emotion or focus (e.g., “What do you see or feel?”)

5. Reflection Circle

- After all activities, gather students in a circle and invite volunteers to share what they learned or how they felt.

Teacher's Role:

- Set the purpose before playing the video:
- “We’re going to watch a video that helps us learn how different people live, move, talk, and learn in their own ways.”
- Give students a focus question:

- “While you watch, think about: What things are hard for the people in the video? How do they solve those problems?”
- Pause during key moments to ask:
- “What do you notice?”
- “How do you think that person feels?”
- “What helps them do everyday things?”
- Guide a short reflection discussion afterward to help students connect what they saw to what they’re learning.

Expected From Students

- Watch the video attentively.
- Think about the challenges shown in the video and how people solve them.
- Answer simple questions about what they noticed (with words, drawings, or gestures).
- Share their thoughts about how it might feel to be in someone else’s shoes.
- Show kindness and curiosity during the discussion.

Parts of the books included

Screen Lessons

Click the link to watch a video and learn more about people who face challenges.

<https://youtu.be/wIAhSeVpQsU?feature=shared>

Screen Lessons

Objective:

Students will recognize that everyone is different in their own way and understand how to show kindness, acceptance, and respect toward people with disabilities or unique needs.

Video link: <https://youtu.be/wIAhSeVpQsU?feature=shared>

Possible Strategies for implementation:

1. Pre-Watching: Set a Purpose

- **Strategy:** Wonder & Connection Prompt
- **How to Implement:**
 1. Before showing the video, ask students to think about this question:
“Have you ever felt different or had to do something in your own special way?”
 2. Invite a few students to share their ideas.
 3. Explain: “In this video, we’ll meet kids who do things in different ways—and that’s what makes them special. Let’s see how they stay brave and proud.”

2. During Watching: Active Engagement

- **Strategy:** Focused Viewing with Key Questions
- **How to Implement:**
 1. Before starting the video, tell students to listen for:
 - “What makes each character different?”
 - “How do they solve problems or do things in their own way?”
 - “How do others treat them kindly?”
 2. Pause the video after 3–2 characters to check in and ask:
 3. “What did you notice about how they feel or what they do?”

4. Post-Watching: Discussion and Reflection

- **Strategy:** Think-Pair-Share + Draw or Write
- **How to Implement:**
 1. Ask students:
 - “What did this video teach you about people who are different?”
 - “What can we do to be kind and helpful friends?”
 2. Give students time to think quietly.
 3. Pair them with a classmate to share one idea.
 4. Invite students to draw or write about:
 - Something they do in their own way.
 - A way they can help someone who has a challenge.
 5. Share a few examples aloud during class discussion.

Elaborate and Evaluate

Teacher's Role:

- **Guide Deeper Thinking:**

Encourage students to apply what they've learned by solving real-world problems (e.g., designing inclusive spaces).

Provide context and prompts during group work and design activities.
- **Support Collaboration**

Facilitate team discussions during the space redesign activity.

Ask guiding questions such as:

 - “What would help someone who uses a wheelchair?”

- "What would make this space fair for everyone?"
- **Reinforce Key Vocabulary & Concepts**
Use terms like disability, inclusion, technology, and accessibility during student reflections and group sharing.
- **Assess Understanding Formatively**
Observe participation and reasoning during the multiple-choice questions and group tasks.
Clarify misunderstandings or reframe questions when students struggle.
- **Provide Extension Through Technology**
Direct students to the TinyTap technology game for independent exploration and reinforcement.
Monitor engagement and help with access if needed.

Expected From Students:

- **Elaborate (Apply and Extend Understanding)**
Work with peers to choose a space (e.g., classroom, bathroom) and brainstorm design solutions for accessibility.
Share ideas through writing or drawing how they would improve that space.
Use empathy and reasoning to think about different types of needs (mobility, sight, hearing).
- **Evaluate (Demonstrate Understanding):**
Answer review questions like:
 - "What does muscular dystrophy mean?"
 - "Why might someone use a wheelchair?"
Participate in the interactive game (e.g., TinyTap activity) to review what technology is and how it helps people.
Reflect on learning by applying it in context and demonstrating knowledge independently or in small groups.

Parts of the books included.

Apprentice

Objective:

Students will demonstrate their understanding of physical disabilities and assistive tools by identifying correct information about muscular dystrophy and wheelchair use.

Answer:

Apprentice

- | | |
|--|--|
| <p>1. Mia has muscular dystrophy, which means:</p> <ul style="list-style-type: none"> A. She can run very fast. B. Some of her muscles are getting weaker. C. She cannot talk. D. She is good at basketball. | <p>2. Ian uses a wheelchair because:</p> <ul style="list-style-type: none"> A. His legs are not strong enough to walk. B. He does not like to run. C. He cannot draw well. D. He wants to play soccer. |
|--|--|

Possible Strategies for Implementation:

1. Pre-Teach Key Terms:

- Before the activity, review vocabulary like “muscles,” “muscular dystrophy,” and “wheelchair.”

2. Use pictures or visuals to support understanding.

- Read Aloud + Think Aloud:
- Read each question and options aloud.
- Model how to think through each option: “Hmm, let’s see... Is this true? Why or why not?”

3. Pair Work or Small Groups:

- Let students work in pairs to discuss and choose answers together.
- Encourage them to explain their thinking to each other.

4. Use Response Cards:

- Have students hold up A, B, C, or D cards to show their answer after each question.
- This keeps the activity interactive and inclusive for emerging readers.

5. Follow-Up Discussion:

- After answering, discuss why the correct answers make sense.
- Reinforce empathy: “How do you think Mia or Ian feels when things are hard to do? What helps them?”

Builder

Objective:

Students will collaborate to identify barriers in common spaces and design simple solutions to make those spaces more accessible for people with physical or sensory disabilities.

Materials Needed:

- Large drawing paper or sketch sheets
- Pencils, markers, crayons
- Chart paper or whiteboard for group brainstorming (optional)
- Picture cards of different rooms (optional support)
- Assistive tool visuals (e.g., ramps, braille signs, grab bars)

Activity Instructions

1. **Introduce the Task:** “Let’s become designers! Your job is to choose a space and think about how to make it easier for everyone to use—including people who use wheelchairs, have trouble seeing, or need quiet spaces.”
2. **Step-by-Step:**
 - Have each group choose a space from the list (Classroom, Bathroom, Hallways/ Doors, Kitchen).
 - Ask them to talk together about the problems someone might face in that space.
 - Have students brainstorm ideas to fix those problems (e.g., wider doorways, lower shelves, ramps, voice-activated lights).
 - Let students draw or write their ideas in the box provided
3. **Prompt their thinking with questions like:**
 - “Can a wheelchair move easily in this space?”
 - “Would someone who cannot see or hear well be able to use this room?”
 - “How can we help people feel safe and welcome?”
4. **Wrap-Up:** Invite groups to present their design and explain how it helps others.

Mastermind

Objective:

Students will explore and identify examples of technology and understand how technology helps people solve problems and make everyday tasks easier.

Activity link: <https://www.tinytap.com/activities/g2uut/play/tell-me-about-technology>

Activity Instructions

Step 1: Introduce the Concept.

- **Begin by asking:**
- “What do you think technology is?”
 - Let students share simple answers, then clarify:
 - “Technology is anything people make or use to help solve problems or make life easier—like a pencil, a ramp, or a computer!”

Step 2: Set the Purpose.

- Explain:
 - “Today, we’re going to play a fun game that teaches us more about technology. It will help us see how different tools—big or small—can help people every day.”

Step 3: Guide Access to the Game.

- **Display or share the link:**
 - <https://www.tinytap.com/activities/g2uut/play/tell-me-about-technology>
 - **Help students open it on their tablets, computers, or interactive board.**

Step 4: Support Student Engagement.

- As students play, walk around to assist with navigation.
- Encourage students to say out loud what they’re learning or noticing.
- Ask guiding questions:
 - “What is that tool used for?”
 - “Is this something we use every day?”
 - “Who might this tool help?”

Step 5: Post-Game Reflection (Optional).

- After the game, ask:
 - “What is one new thing you learned about technology?”
 - “What is one tool you use that makes life easier?”
- Allow them to draw or write their answer on a small sheet or exit ticket.

Now I Can

Objective:

Students will reflect on their learning by identifying personal achievements related to empathy, accessibility, and the role of technology in helping others.

Activity Instructions

Step 1: Introduce the checklist:

- Say: “Let’s think back on everything we learned this session. You’ve explored what it’s like to face challenges, thought about how to make things fair for others, and learned how technology can help.”

Step 2: Guide students through the checklist:

- Read each sentence aloud one by one.
- Pause after each and ask: “Did you do this? Give me a thumbs up if you feel proud of this learning!”

Step 3: Have students complete the page:

- Ask them to check off what they feel confident about. Remind them:
 - “It’s okay if you don’t check everything yet. These are things we’re all still learning!”

Step 4: Optional extension:

- Ask students to circle one they’re proud of and explain it with a sentence or drawing.

Relation to Standards

1. English Language Arts (ELA):

CCSS.ELA-LITERACY.SL.2.1

Participate in collaborative conversations with diverse partners about grade 2 topics and texts.

- Students discuss challenges and solutions together.

CCSS.ELA-LITERACY.SL.2.2

Recount or describe key ideas from a text or information presented orally or through other media.

- Students reflect on stories and videos about people with disabilities.

CCSS.ELA-LITERACY.W.2.8

Recall information from experiences or gather information from provided sources to answer a question.

- Students reflect and write/draw what they learned in “Now I Can” and drawing tasks.

2. Next Generation Science Standards (NGSS):

K-2-ETS1-1

Ask questions, make observations, and gather information about a situation people want to change.

- Students explore how to improve home spaces for accessibility.

K-2-ETS1-2

Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function.

- Students design accessible spaces (ramps, open doors, etc.).

3. ISTE Standards for Students (Technology):

Empowered Learner (1a, 1d)

- Students understand the basics of technology and how it can solve problems at home.
- They use tools like interactive games to extend their learning.

Innovative Designer (4a, 4b)

- Students design inclusive home solutions and explore assistive technologies.
