

THE CHAT BUTTONS

Grade **03**

ALIGNED WITH INTERNATIONAL STANDARDS

This book supports essential educational frameworks that shape future-ready minds:

- 21st Century Skills
- Sustainable Development Goals (SDGs)
- Social-Emotional Learning (SEL)
- Universal Design for Learning (UDL)

STEAM Scouts is a ground-breaking STEAM book series with an interdisciplinary focus designed to ignite curiosity, creativity, and critical thinking in learners worldwide. The series supports Social-Emotional Learning (SEL) by promoting core competencies like self-awareness, self-management, social awareness, relationship skills, and responsible decision-making. It also aligns with the UN Sustainable Development Goals (SDGs), fosters 21st Century Skills, and meets international educational standards to equip learners with tools for a dynamic, innovative, and impact-driven future. Furthermore, it is built on Universal Design for Learning (UDL) principles, ensuring inclusive, accessible, and engaging STEAM education for all students, regardless of learning ability.

Key Features

Standards-Aligned

- NGSS (Next Generation Science Standards) – Authentic scientific inquiry & engineering design.
- CCSS (Common Core State Standards) – Rigorous literacy & math integration.
- Cambridge & IB (PYP/MYP/DP) – Global perspectives & interdisciplinary learning.
- ISTE (Technology Standards) – Digital literacy & computational thinking.
- STEL (Standards for Technological & Engineering Literacy) – Real-world problem-solving.

Social-Emotional Learning (SEL) and Global Citizenship

- Each book fosters collaboration, resilience, leadership, and ethical decision-making while connecting to multiple UN Sustainable Development Goals (SDGs) - such as Quality Education (SDG 4), Clean Energy (SDG 7), Climate Action (SDG 13), and Innovation (SDG 9) - empowering students to think globally, encourages ethical innovation & community impact.
- Differentiated challenges to meet diverse learning needs and skill levels.
- Visual cues and infographics to enhance understanding and engagement.
- Guided instruction to support learners through new or complex concepts.
- Scaffolded activities that build skills progressively and promote learner independence.

Why Choose This Series?

Future-Ready Skills – Prepares learners with essential skills like creativity, collaboration, and critical thinking for future careers and global challenges.

Teacher & Student-Friendly – Includes engaging lesson hooks, discussion prompts, guided instruction, and hands-on tasks for seamless learning.

- **SDG-Themed Modules** – Each module links to 2+ UN SDGs, blending academics with global purpose and ethical action.
- **Inclusive & Engaging** – Built on UDL principles to ensure accessibility through differentiated pathways, visual supports, and hands-on learning.

Perfect For:

- K-12 Schools adopting IB, Cambridge, NGSS, or CCSS
- STEM/STEAM Coordinators seeking industry-relevant curricula
- Homeschoolers and Educators wanting SDG-aligned, future-focused content
- Educational Institutions committed to sustainability and inclusion

Theme

03

THE CHAT BUTTONS

Each week has a double session, total time of session 80-90 mins

Week	Unit Name	Lesson	Page
Week 1	Unit 1: Spark The Challenge!	Lesson 1: Can Technology Speak?	2-15
Week 2		Lesson 2: The Magic of Vibrations.	16-31
Week 3		Lesson 3: The Engineer's Journey.	32-43
Week 4	Unit 2: Innovators in Action	Lesson 1: Building a Talking Machine.	44-64
Week 5		Lesson2: The Brain Behind the Sound!	65-82
Week 6	Unit 3: Beyond Imagination	Lesson 1: Your Gesture-to-Sound Masterpiece!	83-104
Week 7		Lesson 2:	
Week 8		Wave Hello!	105-125

About The Theme

Everyone deserves a home that is smart, safe, and welcoming—regardless of their needs or abilities. However, not all homes are designed with inclusivity in mind. Some individuals may face challenges with mobility, vision, hearing, or dexterity. In this theme, students will become young innovators, coders, and engineers as they explore how artificial intelligence (AI) and smart technology can make homes more accessible, adaptable, and user-friendly for all.

Through engaging design challenges, students will create smart solutions that respond to voice commands, sounds, and movement. They'll build simple machines like ramps and pulleys, use 3D tools to design inclusive spaces, and experiment with circuits that include LEDs, sensors, and programmable components. Students will even prototype their own voice-controlled rooms, learning how AI technologies are used in smart homes to enhance daily life.

As they work, students will build computational thinking skills—writing clear algorithms, recognizing patterns, and using conditionals to design responsive systems. They'll discover how AI and coding work together to create intelligent environments that assist people with a wide range of needs—such as turning on lights with voice input or automating tasks for greater comfort and independence.

This project supports Sustainable Development Goals 9 (Industry, Innovation, and Infrastructure), 10 (Reduced Inequalities), and 11 (Sustainable Cities and Communities). It encourages students to blend empathy, creativity, and problem-solving with technology. By the end of the theme, students will have designed a smart, inclusive home—demonstrating how AI and coding can help build a more comfortable, fair, and connected world for everyone.

HOW TO USE THIS BOOK?

1

Ready, Set, Learn!

Where we merge your existing knowledge with exciting new discoveries.

2

Inquiry-Based Learning!

Let's Think!

In this section, students will brainstorm and explore possible solutions to specific problems. This encourages critical thinking and creativity as they consider various approaches.

Explorer's Toolkit

Here, students will dive deeper into the topic. They will engage with curated videos, articles, educational games, and hands-on experiments to broaden their understanding and spark curiosity.

DIY Lab

It's part of the explore, students will undertake hands-on projects where they will design, build, and test their own creations. They will apply scientific principles, use technology and engineering skills, explore artistic concepts, and utilize mathematical reasoning.

Screen Lessons

Students will watch videos that explain key concepts in an engaging and accessible way.

3

Problem-Based Learning:

- **Introducing the problem:**
Students will join a journey to tackle real-world environmental challenges. Through hands-on activities and engaging tasks, they will apply their knowledge and skills to discover innovative solutions.
- **Apply the Engineering Design Process (EDP):**
Students will use a structured approach to define problems, conduct research, generate ideas, prototype solutions, test, evaluate, and refine their designs.
- **The Scientific Method:**
Students will follow a systematic process of inquiry—making observations, forming hypotheses, conducting experiments, analyzing data, and drawing conclusions—to develop a deeper understanding of scientific concepts and problem-solving. In doing so, they will incorporate the CER framework to present their scientific claims, provide evidence from their experiments, and explain their reasoning behind the conclusions they draw.

4

Project-Based Learning:

PBL immerses students in real-world challenges through hands-on projects. They build critical thinking, creativity, collaboration, and communication skills while designing solutions and taking ownership of their learning.

5

Story

Join Adam and Laila, two fearless STEAM Scouts, on adventures full of discovery and creativity! From building inventions to solving real-world challenges, they'll inspire you to think, experiment, and innovate. Step into the world of science, technology, engineering, arts, and math—where every challenge becomes an adventure!

Story Reflection

In this section, students will reflect on the story's key themes, characters, and challenges.

6

Assessment Exercises:

These are divided into three categories to ensure comprehensive learning and mastery.

Apprentice:

Developing understanding and can apply skills with guidance.

Builder:

Demonstrates solid understanding and can apply skills independently.

Mastermind:

Demonstrates deep understanding and can apply skills creatively and strategically.

7

Career Readiness

This section equips students with essential skills for future careers by fostering problem-solving, teamwork, and adaptability. Through hands-on projects, real-world applications, and critical thinking challenges, students develop the confidence and competencies needed for success in the ever-evolving job market.

8

Mission Innovate

Now, it's your turn! In Mission Innovate; students will apply their creativity, problem-solving skills, and knowledge to develop their own competition projects. This challenge encourages independent thinking, collaboration, and real-world innovation, empowering students to become the next generation of creators and problem-solvers.

Now I Can

This section is designed to help you measure your progress and achievements. Enjoy your exploration and learning journey through this STEAM book!

My Journal

In this part students will write their own story while they are creating the project.

By the end of this theme, students will be able to:

- Understand that some people cannot speak or hear like others.
- Show care and empathy for people with communication challenges.
- Learn how people shared messages long ago and today.
- Understand where sound comes from and how it moves through different materials.
- Use the engineering design process to make a device that helps people talk using technology.
- Connect a battery, DFPlayer module, and speaker correctly to create a working circuit.
- Demonstrate how adding components in series affects the circuit.
- Develop basic programming skills using block-based coding.
- Recognize components of a robotic system and their roles.
- Make a 3D box with the right shapes and spaces inside.
- Make a design easy for everyone to use.
- Use metric units like millimeters to measure.
- Understand machine learning and train model to understand sign language.

Unit

1

Lesson

1

Spark The Challenge!

Can Technology Speak?

Time Frame: [90 min]

Lesson Objectives:

By the end of this lesson students will be able to:

- Understand how people share thoughts without speaking.
- Show kindness by acting out how others feel.
- Talk about how communication has changed over time.
- Explain how special tools help people communicate.

Challenge questions of the lesson

1. How can people share ideas or feelings without using words?
2. How would you feel if no one understood what you were trying to say?
3. How did people send messages before phones and the internet?
4. What tools or devices help people who can't hear or speak?

SEL Relation

- Social Awareness & Communication Skills.
- Empathy & Relationship Skills.
- Self-Awareness & Responsible Decision-Making.
- Compassion, Inclusion & Problem Solving.

Engage

Teacher Role:

- Introduce the story by connecting it to students' real lives (e.g., making new friends or using body language).
- Read the story with emotion and expression to bring the characters to life.
- Lead a discussion about how Omar communicates and how the other characters respond.
- Use images and story cards to show facial expressions and feelings.
- Encourage respectful discussion and open sharing of thoughts and experiences.

Expected From Students:

- Listen carefully and stay focused during the story.
- Answer questions and share ideas about emotions, kindness, and challenges.
- Use pictures, words, or gestures to express understanding.
- Connect the story to their own lives and experiences.

Parts of the books included.

Ms. Sara (smiling): "Class, we have a new friend today! This is Omar. Let's all say hello!"

Students (happily): "Hi, Omar!"
Omar smiles but doesn't say anything. He takes out a small notebook, writes something, and shows it: "Nice to meet you."

(The class becomes quiet. Adam and Laila look at each other, a little confused.)

Adam (whispering): "Why isn't he talking?"

Laila: "Maybe he's feeling shy?"

Ms. Sara walks closer and said: "Omar doesn't talk like we do. He uses writing and hand signs to share his thoughts. But he still has amazing ideas!"

During the lunch break later that day,

Adam (sighing): "It must be hard for Omar to make friends if he has to write everything."

Laila (looking sad): "Yeah... Writing takes a long time, and people talk too fast." Suddenly, Adam has an idea. He snaps his fingers and smiles.

Adam: "What if we make something to help Omar talk?"

Laila: "Yes! Let's ask Ms. Sara!"
(They eat fast and hurry back to class.)

STEAM SCOUTS

3

Pyramakerz®

Adam (excited): "Ms. Sara, we want to make something to help Omar talk!"

Laila (nodding): "Yes! Like a machine that can say what he writes?"

Ms. Sara: "That is a great idea! Have you heard of a scientist named Stephen Hawking?"

Adam (blinking): "Who?"

Ms. Sara: "Stephen Hawking was a very smart scientist. But he had a sickness that made his body weak, and he could not talk. So, he used a special machine that changed his words into sounds."

Laila (excited): "So... if we learn how sound works, we can build something like that for Omar?"

Ms. Sara (nodding): "Yes! But first, we need to learn how sound works. Are you ready?"

Adam, Laila, and the class cheer happily—ready for their new project!

4

STEAM SCOUTS

Story Reflection

1. Why was Adam and Laila's new friend Omar feeling a little sad?

- A. He lost his notebook.
- B. He couldn't talk like the others.
- C. He didn't understand the lesson.
- D. He forgot his homework.

2. How did Adam and Laila learn that Omar couldn't speak?

- A. Omar wrote it in his notebook.
- B. Omar used hand signs to show them.
- C. Omar whispered it to them.
- D. Ms. Sara told them.

3. What did Adam and Laila decide to do to help Omar?

- A. They ignored the problem.
- B. They tried to build a talking machine right away.
- C. They asked Ms. Sara for ideas.
- D. They taught Omar sign language.

4. What true story did Ms. Sara share with the class?

- A. How the telephone was invented.
- B. The story of Stephen Hawking.
- C. How animals talk to each other.
- D. About a famous singer who lost their voice.

Let's Think!

Imagine waking up tomorrow and... poof! Your voice is gone. No talking, no sounds—just quiet. How would you...

- Ask for your favorite snack?
- Tell your best friend a secret?
- Show someone you're feeling proud?

Figure 1: A girl who can't talk.

5

STEAM SCOUTS

Story

- **Teacher says (warmly, with curiosity):**

“Today, we’re going to meet someone new — just like you sometimes meet new friends in class. But this friend, Omar, communicates in a different way. Let’s read together and find out how!”

Then say:

“While we read, I want you to pay close attention to how Omar shares his thoughts, and how Adam and Lila respond. Let’s think about how it feels to be understood — even without using your voice.”

Possible Strategies for Implementation:

1. Empathy Role-Play (Social-Emotional Learning)

- Students take turns acting as Omar, Lila, or Adam.
- Use real objects (notebook, silent signs) to help students imagine how Omar communicates.
- Pause after each scene and ask, “How would you feel in Omar’s place?” or “What could you do to help someone like Omar?”

2. Picture Talk + Feelings Chart

- Use printed images or emoji cards to show feelings (confused, proud, shy, thoughtful).
- Ask: “What emotion do you think Adam felt when Omar didn’t speak?”
- Have students place or circle emotions in their notebooks or on a poster.

3. Connection to Real Tools

- Bring in or show visuals of AAC (augmentative and alternative communication) tools — picture boards, speech devices, or apps.
- Ask: “Which one could help someone like Omar share ideas faster?”

4. Think-Pair-Share

- After reading, have students turn to a partner:
 - “What would you say or do if Omar joined our class?”
 - “What’s one way you could help someone feel welcome without speaking?”

Story Reflection

Objective:

Students will recall and reflect on the main events in the story, identify character feelings and responses, and relate the situation to real-world empathy and communication challenges.

Answer:

1. Why was Adam and Laila's new friend Omar feeling a little sad?

- A. He lost his notebook.
- B. He couldn't talk like the others.
- C. He didn't understand the lesson.
- D. He forgot his homework.

2. How did Adam and Laila learn that Omar couldn't speak?

- A. Omar wrote it in his notebook.
- B. Omar used hand signs to show them.
- C. Omar whispered it to them.
- D. Ms. Sara told them.

3. What did Adam and Laila decide to do to help Omar?

- A. They ignored the problem.
- B. They tried to build a talking machine right away.
- C. They asked Ms. Sara for ideas.
- D. They taught Omar sign language.

4. What true story did Ms. Sara share with the class?

- A. How the telephone was invented.
- B. The story of Stephen Hawking.
- C. How animals talk to each other.
- D. About a famous singer who lost their voice

Possible for implementation:

1. Model the Thinking Aloud

- Read each question aloud and model how to think through the answer:
 - "Hmm... if Omar wrote in his notebook, maybe that's how they found out he doesn't speak..."

2. Picture Cards or Emotion Prompts

- Use visuals to match emotions or actions from the story. For example:
 - Show an image of Omar writing and ask, "What does this tell us?"
 - Point to Stephen Hawking's image and ask, "Why did Ms. Sara mention him?"

3. Partner Share

- Before answering each question, ask students to turn to a partner and discuss what they think happened and why.

4. Use Resource Cards or Movement

- Let students use A/B/C/D cards or move to different corners of the room to show their answers, then explain their choice.

Let's Think!

Objective:

Students will imagine how it feels to lose the ability to speak and explore alternative ways to communicate using gestures, drawing, or body language. This builds empathy and creative expression.

Answers:

- Drawing a snack, pointing to it, or acting it out
- Whispering with gestures, writing in air or on paper
- Smiling, thumbs up, clapping, showing proud posture
- Pictures showing emotion, gestures, or simple action scenes

Possible Strategies for implementation:

1. Think-Pair-Share Warm-Up

- Ask students to imagine losing their voice for a day.
- Let them whisper ideas to a partner or act out examples silently before drawing.

2. Draw-and-Display

- Provide drawing templates or speech-bubble visuals.
- Post student work on a “Wall of Silent Communication” to celebrate their ideas.

3. Facial + Body Cues Focus

- Show examples of facial expressions or gestures and ask:
 - “How could you show you want help?”
 - “How do you show someone you’re happy?”

Explain

Teacher's Role:

- Set up the "Silent Challenge" as a playful, hands-on experience.
- Pair students and guide them through switching roles.
- Encourage careful observation and thoughtful reflection.
- Lead a follow-up discussion using empathy-focused questions.

Expected From Students:

- Act out the communication activity with care and focus.
- Notice how they feel during the activity.
- Write or draw how it felt to try to "speak" without sound.

Parts of the books included.

DIY Lab

Objective:

Students will experience what it's like to communicate without speaking. This builds empathy and helps them understand the daily challenges people with communication difficulties face.

Materials Needed:

- Open space for pairs to interact
- Optional: Picture cards or emotion flashcards for support

Activity Instructions

1. Partner A silently asks for a glass of water using only gestures or expressions.
2. Partner B guesses what they need.
3. Switch roles.
4. Reflect: "Was it harder to speak or to listen? Why?"
5. Students write or draw their reflections.

Possible Strategies for Implementation

1. Model the Activity

- Act it out with a student first so everyone understands the challenge.

2. Use Visual Prompts

- Provide gesture or expression examples for students who need help getting started.

3. Support Discussion After

- Guide a short class discussion with prompts like:
 - “What did you notice?”
 - “How did you feel when no one understood you?”
 - “How can we help people in real life who have trouble speaking?”

4. Incorporate SEL Reflection

- Let students circle or draw how they felt using emojis or feelings flashcards.

Teacher's Role:

- Introduce the video and explain its connection to the story.
- Pause and prompt students with key questions during viewing.
- Lead a short discussion afterward to connect tools to real needs.

Expected From Students:

- Watch attentively.
- Think about how inventions help people communicate.
- Write or share about surprising tools and ideas for improvement.

Parts of the books included.

Screen Lessons

Let's watch how humans went from cave walls to smartphones!

<https://www.youtube.com/watch?v=34KdDN1L1N4>

While watching:

1. List 3 tools that surprised you.

2. Which invention would you improve?

Screen Lessons

Objective:

Students will recognize how communication tools have changed over time and explore how different technologies help people share ideas and stay connected.

Video link: <https://www.youtube.com/watch?v=34KdDN1L1N4>

Possible Strategies for implementation:

1. Pre-Watching Prompt

- Ask: “How do you think people shared ideas a long time ago?”
- Let students brainstorm 3–2 tools they already know.

2. Guided Viewing

- Pause at key parts of the video and ask:
 - “What tool did they use here?”
 - “Why do you think that was helpful back then?”

3. Active Listening Worksheet

- Give each student the two reflection questions before watching to keep them focused:
 - List 3 tools that surprised you.
 - Which invention would you improve?

4. Group Sharing

- After watching, students share their favorite invention with a partner or small group.
- Use drawing as a follow-up to show their idea for improving a tool.

5. Discussion Wrap-Up

- Ask: “How do inventions help us speak, share, and learn better today?”

Elaborate and Evaluate

Teacher's Role:

- Guide students through the Apprentice, Builder, and Mastermind tasks.
- Encourage creative and critical thinking about communication over time.
- Support comparisons between past and modern tools.
- Celebrate different solutions and ideas.

Expected From Students:

- Answer questions and complete drawing or timeline tasks.
- Participate in interactive activities like Morse code communication.
- Think critically about challenges faced by those who can't speak.

Parts of the books included.

Assessment

Apprentice

- Imagine you see a lion and want to warn your group—what would you do?
 - Write letters
 - Signs/gestures
 - Telephones
 - Smoke signals
- Why was papyrus important?

Builder

Go to this link:

<https://morsecode.world/american/translator.html>

- Try writing your own short message and see how it looks in Morse code.
- Now, click this link to see a secret message:

<https://morsecode.world/m?m=elxiYhcRsYGALYwgBMY2KCylxBZGAQ4uC7c%253D>

STEAM SCOUTS

7

How did it feel to "talk" using Morse code?

Was it easy or a bit tricky?

A	..	N	..	0	----
B		O	---	1	
C	..-.	P	..-.	2	
D	..-.	Q	..-.	3	
E	.	R	..	4	
F	..-.	S	...	5	
G		T	-	6

J		W	..-	9	
K	..-	X	..-	Fullstop	----
L	..	Y	..-	Comma	
M	--	Z	--	Query	..-.

Figuer 5: Website.

Figuer 6: Morse Code Message.

8

Apprentice

Objective:

Students will explore the history of communication tools, understand how humans have shared messages over time, and imagine future ways of communicating.

Answer:

1. B) Signs/gestures (fastest and most useful for a lion warning).

Possible Strategies for Implementation:

1. Timeline Talk.

- Use large visuals or printable timeline cards.
- Let students place or stick images in the right order as a group.

2. Story-Based Roleplay.

- Ask students to imagine being people in the past (a cave artist, a messenger, etc.).
- Ask: “What would you do if you wanted to warn others about danger?”

3. Think-Pair-Draw.

- Students pair up to brainstorm a future communication method, then draw and label it.

4. Vocabulary Support.

- Review or pre-teach words like “papyrus,” “gesture,” “scroll,” and “message.”

5. Mini Presentations.

- Invite students to present their future tool to the class and explain how it works.

Builder

Objective:

Students will explore how messages can be sent using Morse code and practice creating and decoding simple messages.

Activity link: <https://morsecode.world/american/translator.html>

Activity Instructions

1. Go to this link: <https://morsecode.world/american/translator.html>
2. Try writing your own short message and see how it looks in Morse code.
3. Now, click this link to see a secret message: <https://morsecode.world/m?m=eJxjYhcRsYGALYwgBMY2KCylxBZGAO4uC7c253%D>

Can you figure out what it says?

Write your answer below:

.....

Reflect on your experience:

How did it feel to “talk” using Morse code?

.....

Was it easy or a bit tricky?

.....

Possible Strategies to Implement:

1. Pair students to exchange simple Morse code messages.

2. Display a Morse code chart in the classroom to help students decode faster.
3. Encourage students to create short words or names using the translator tool.
4. Challenge advanced students to send messages using sound or light (short and long beeps or flashes).
5. Discuss how Morse code helped people communicate before modern technology.

Possible Answers:

The secret message says: HELLO

Reflect on your experience:

How did it feel to “talk” using Morse code?

.....

Possible Answers:

- It was fun to use dots and dashes.
- It felt new and different.
- It was a little tricky but exciting.

Was it easy or a bit tricky?

.....

Possible Answers:

- It was easy after I looked at the chart.
- It was tricky at first but got easier.
- It was a bit confusing but fun to try.

Mastermind

Objective:

Students will explore real-world assistive technologies, including those used by people with disabilities such as Stephen Hawking and children with cerebral palsy. They will reflect on how technology can help people communicate in different ways.

Activity link:

1. Stephen Hawking Story (Recap) – Based on the class story
2. Video: <https://www.youtube.com/watch?v=FafFmyfK0T8>

Activity Instructions (For Teachers):

1. **Introduce the Topic.**
 - Remind students about how Stephen Hawking used a computer to speak using his cheek muscle.
 - Say: “Now we’ll see a real child who uses their eyes to talk!”

2. Play the Video.

- Before watching, ask: “What do you think the hardest part is about not being able to speak or move?”
- Play the video once without interruption. Then play it again, pausing to discuss key moments.

3. Guide a Class Discussion.

- Ask:
 - “How does this technology help?”
 - “How do you think the child feels when they can finally share their thoughts?”
 - “What would you invent to help even more?”

4. Optional Extension (Draw or Write).

- Let students draw or write one thing they learned about assistive tools or how they might help someone like the child in the video.

Now I Can

Objective:

Students will reflect on their learning and identify how they’ve grown in understanding communication, empathy, and the role of assistive tools in helping others share ideas.

Activity Instructions

1. Introduce the Reflection.

- Say: “Let’s look back on everything we’ve explored this lesson. You learned how it feels to face communication challenges, and how tools can help people share their thoughts in special ways.”

2. Guide Students Through the Checklist.

- Read each statement aloud one at a time.
- After each one, ask students to give a thumbs up, sideways, or down to show how confident they feel.
- Example prompts:
 - “Did you learn how people share ideas without talking?”
 - “Do you know how tools can help people talk?”

3. Student Completion.

- Let students check off or color the “Now I Can” boxes they feel good about.
- Remind them: “It’s okay if you didn’t check all of them. We’re all still learning.”

4. Optional Extension.

- Ask students to circle the one they’re most proud of.
- Invite them to write a sentence or draw a picture to show their favorite learning moment.

Relation to Standards

1. English Language Arts (ELA):

CCSS.ELA-LITERACY.SL.2.1

Participate in collaborative conversations with diverse partners about grade 2 topics and texts.

- Students discuss feelings, challenges, and communication tools.

CCSS.ELA-LITERACY.SL.2.2

Recount or describe key ideas from a text or information presented orally or through other media.

- Students reflect on stories, videos, and experiences related to non-verbal communication.

CCSS.ELA-LITERACY.W.2.8

Recall information from experiences or gather information from provided sources to answer a question.

- Students draw or write about what they learned in the “Now I Can” checklist and other reflections.

2. Next Generation Science Standards (NGSS):

K-2-ETS1-1

Ask questions, make observations, and gather information about a situation people want to change.

- Students explore how to improve communication through technology for people with disabilities.

K-2-ETS1-2

Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function.

- Students design future communication tools and practice visual storytelling.

3. ISTE Standards for Students (Technology):

Empowered Learner (1a, 1d)

- Students understand the basics of technology and how it can solve problems at home or in the world.
- They use tools like interactive games or videos to explore assistive communication.

Innovative Designer (4a, 4b)

- Students design inclusive home solutions and explore assistive technologies through hands-on tasks.
